

BLOW DOWN HEATER 5662-196

PRODUCT OVERVIEW

The Ekyrail Blow Down Heater 5662-196 is designed to protect critical locomotive components from freezing in harsh winter conditions. Acting as a heating cable assembly, the unit provides consistent thermal protection to maintain reliable system operation during cold weather.

The heater is engineered to activate only within a defined temperature range, helping reduce unnecessary energy consumption while ensuring freeze protection when conditions require it. Its stainless-steel fitting construction provides excellent durability and resistance to harsh railway environments.

Designed as a direct replacement for the Graham White 5662-196 heater assembly, the unit offers an easy retrofit solution for maintenance shops and fleet operators. The heater is also supplied with thermal grease to simplify installation and optimize heat transfer performance.

Product

product

Blow Down Heater 5662-196

Direct replacement

Graham White 5662-196

Usage

Application

Freeze-protection solution designed for critical locomotive components

Heating element

Power

75W

Heating element type

Acting as a heating cable assembly

Cable

Fitting material

Stainless-steel

Wire length

47.5in

Thermostat

Cut in/off

15°C - 8°C

Installation

Included accessories

Thermal grease container for installation
